

28msec

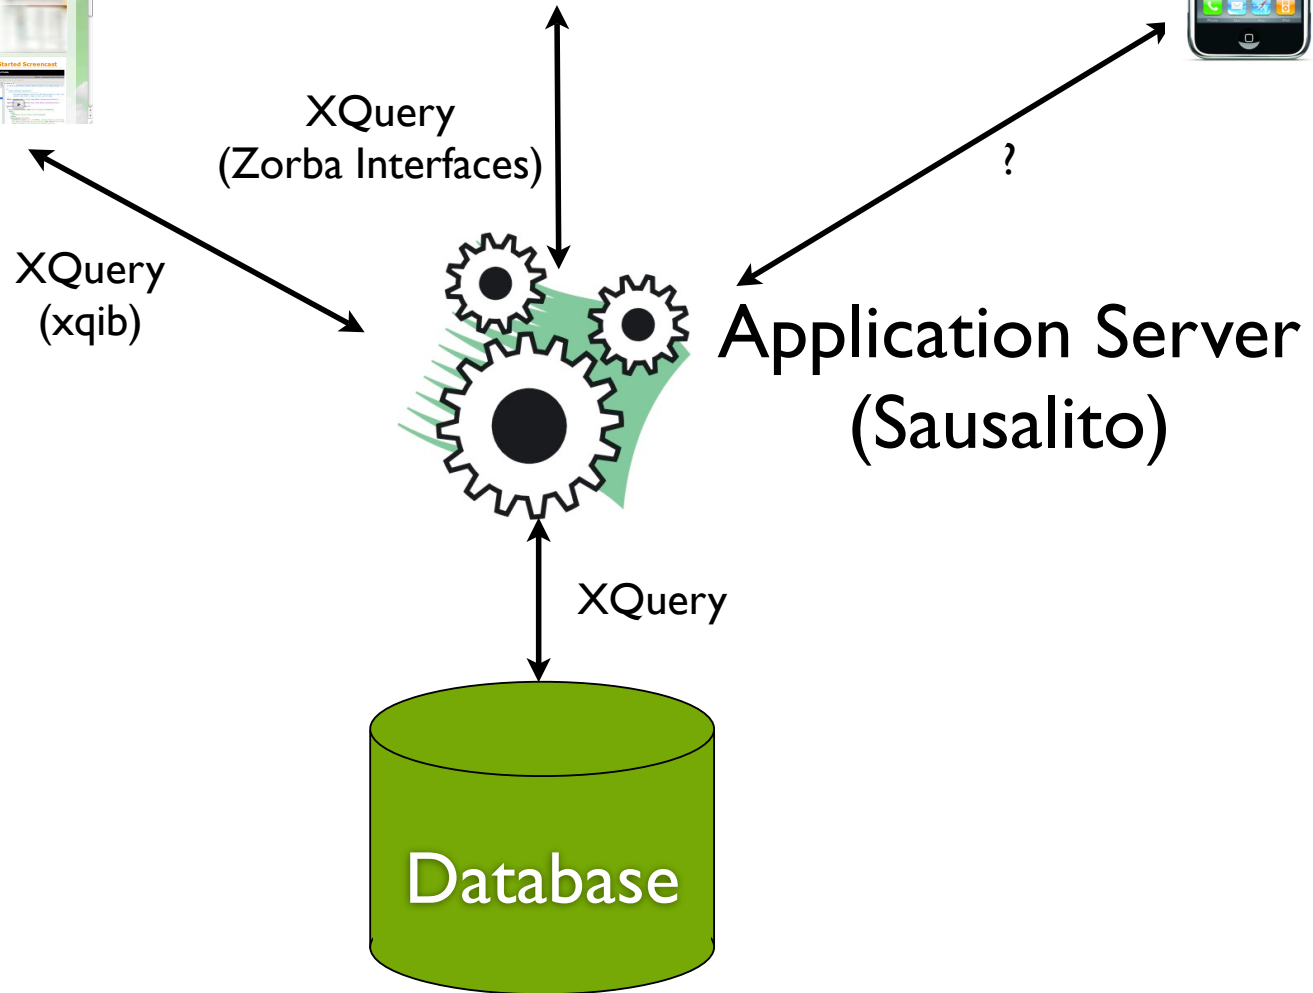

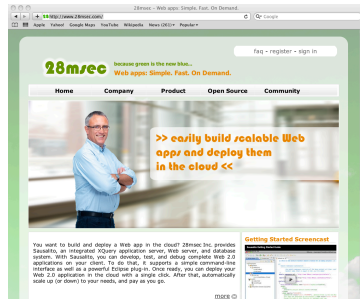

There is one more thing...

We want to use XQuery everywhere

Markus Pilman {markus.pilman@28msec.com},
Daniel Thomas {dathomas@student.ethz.ch}

Platforms

28msec

XQuery on the iPhone

28msec

Since yesterday night, Zorba runs on the iPhone

XQuery on the iPhone

28msec

Since yesterday night, Zorba runs on the iPhone

We call it... **iZorba**

Write and annotate your functions:

```
module namespace me = "http://www.pilman.ch/iphoneapps/demo";
```

```
import module namespace label = "http://www.izorba.ch/widgets/label";
```

```
(:~ @IBOutlet :)  
declare variable $me:input as external;
```

```
(:~ @IBOutlet :)  
declare variable $me:outlabel as external;
```

```
(:~ @iPhoneAction :)  
declare function me:eval() {  
  label:set-text($me:input, eval(label:set-text($me:outlabel)))  
};
```

How does it work?

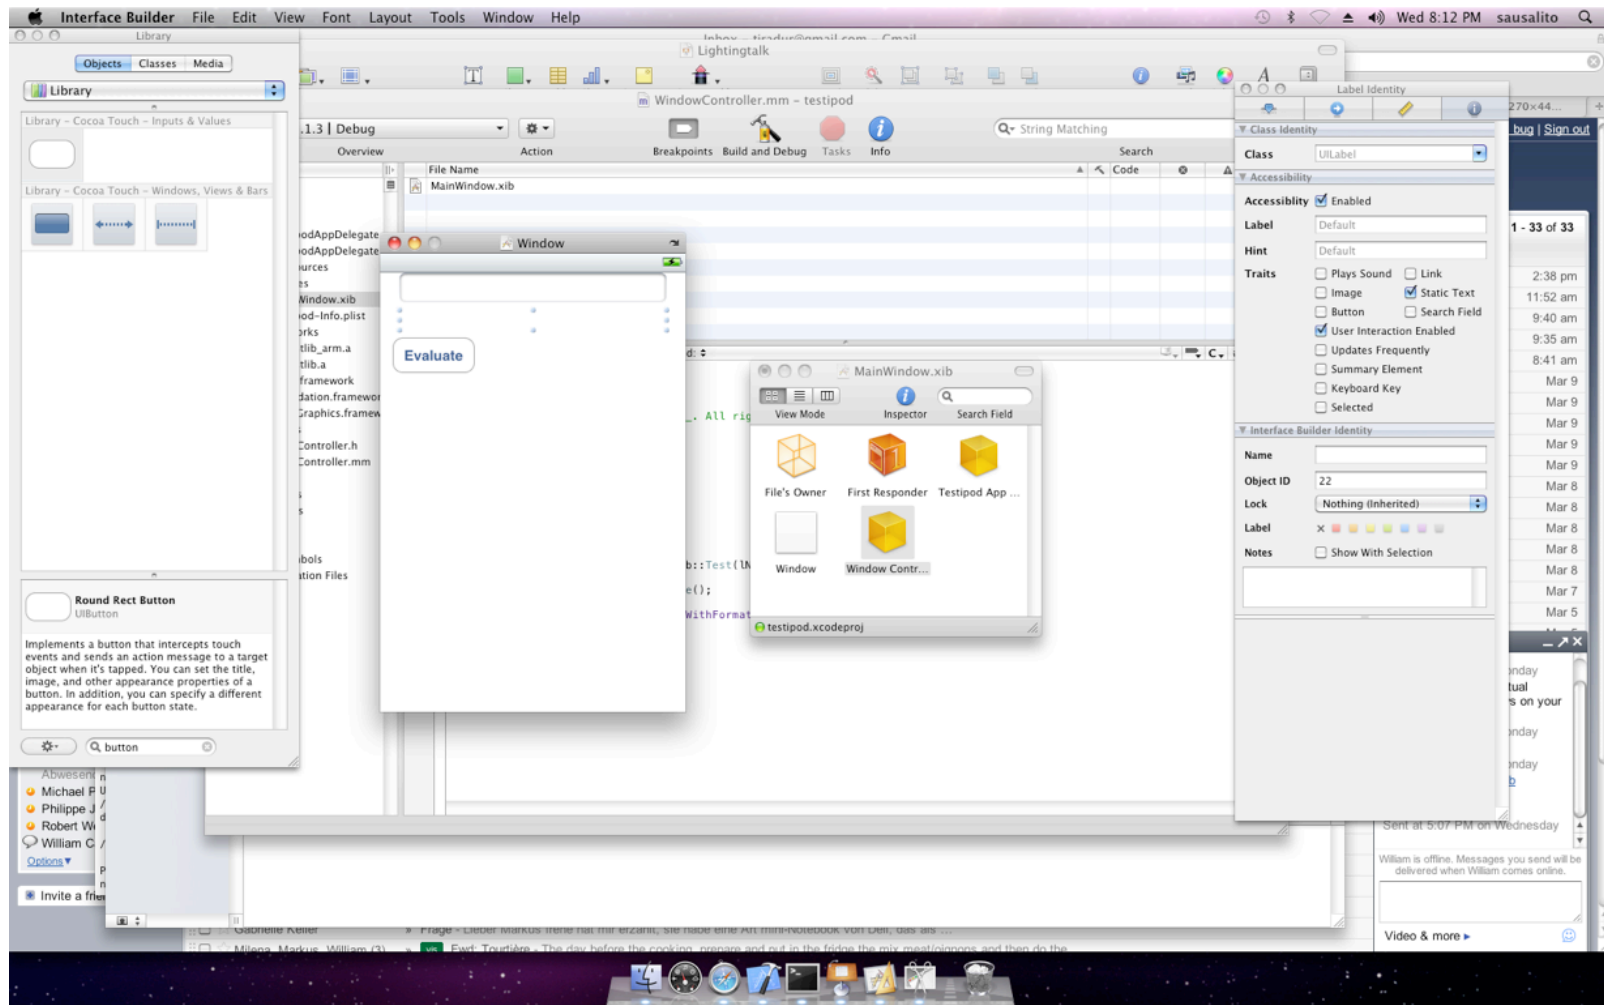

28msec

Let iZorba create a XCode project with all needed Objective-C code for you...

How does it work?

28msec

Design your GUI conveniently with the GUI builder

How does it work?

28msec

Voilà!
